

Super 10 | Yellow Jacket®

Berseem Clover

Increased Production

Nitrogen Fixing

Faster Growth

Key features

- Multiple Cuttings
- Better Quality Forage
- Faster Growth
- More Production

Super 10 | Yellow Jacket® Benefits

Berseem clover contains approximately 18 to 28 percent crude protein depending on growing conditions, making it comparable to alfalfa.

Super 10 | Yellow Jacket® has tremendous potential for providing high quality forage and improving soil conditions as a green manure crop because of its fast growth characteristics and capacity to fix nitrogen in the soil which benefits the following crop.

With early forage production, Super 10 powered by Yellow Jacket® has remarkable potential for providing a high quality, low bloat potential forage, that also improves your soil conditions.

Super 10 | Yellow Jacket® works great as a green manure crop because of its fast growth characteristics and capacity to fix nitrogen in the soil, benefiting the following crop.

Characteristics:

Super 10 | Yellow Jacket® is an annual legume with oblong leaflets and hollow stems. Growth is upright and Super 10 | Yellow Jacket® will produce yellowish white flowers.

Field Advantages:

With multiple cuttings for increased production, Super 10 | Yellow Jacket® is ideal for today's high-producing farmer. Super 10 | Yellow Jacket® will recovery rapidly following cuttings and is adapted to higher temperature environments.

Areas of Adaptation:

Super 10 | Yellow Jacket® is well suited for virtually all US and produces best results when grown in medium-loam soils that are slightly alkaline.

Yield Trial Comparisons:

COMPETITOR	SUPER 10 YELLOW JACKET® YIELD ADVANTAGE	YIELD OF COMP.	YIELD OF SUPER 10 YELLOW JACKET®	TOTAL HARVEST/ YEARS
